Aman Shah Ahamed

Software Engineer | Backend & Distributed Systems

moaslam826@gmail.com | +91 6387959740 | Noida, Uttar Pradesh, India | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building backend services, REST APIs, full-stack applications, and event-driven systems using Node.js, NestJS, TypeScript, PostgreSQL, MongoDB, Redis, and RabbitMQ. Experienced in developing modular services, integrating distributed components, implementing asynchronous processing, optimizing database queries, and troubleshooting production issues. Hands-on experience with Docker, AWS messaging and email services, and third-party API integrations. Focused on maintainable code, scalable system design, application reliability, and end-to-end feature delivery.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, C++
- **Backend Engineering:** Node.js, NestJS, Express.js, REST APIs, Microservices, Modular Architecture
- **Databases:** PostgreSQL, MongoDB, Database Schema Design, Indexing, Query Optimization, Aggregation Pipelines
- **Messaging & Caching:** Redis, RabbitMQ, AWS SQS, BullMQ
- **Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS, Zustand
- **Cloud & Infrastructure:** AWS SES, S3, SNS, Lambda, Docker, Linux
- **Engineering Practices:** Distributed Systems, Asynchronous Processing, API Design, Error Handling, Debugging, Performance Optimization, Git,

EXPERIENCE

Full Stack Developer - Khan Global Studies, Noida
March 2024 - Present

www.khanglobalstudies.com

- Design, develop, and maintain backend services and REST APIs using Node.js, NestJS, and TypeScript to support business workflows and frontend applications.
- Build modular services with clear responsibilities, reusable components, request validation, and structured error handling.
- Implement event-driven workflows and asynchronous job processing using RabbitMQ, Redis, and BullMQ.
- Develop email-processing workflows using AWS SQS, SES, S3, SNS, and Lambda for message delivery, event handling, and background processing.
- Design database schemas and optimize MongoDB and PostgreSQL queries to improve application performance and support business requirements.
- Integrate external services, including Shiprocket, RapidShip, and NimbusPost, into order management and shipping workflows.
- Improve backend performance through API optimization, Redis caching, database query improvements, and production debugging.
- Use Docker and Git-based workflows to support consistent development and deployment processes.
- Investigate production issues, identify root causes, and implement fixes to improve service reliability.
- Collaborate with product and engineering stakeholders to deliver features from implementation through deployment and ongoing maintenance.

Software Engineer - Jellyfish Technologies, Noida
July 2022 - March 2024

www.jellyfishtechnologies.com

- Developed and maintained backend APIs and application workflows to support business requirements and frontend integrations.
- Owned feature development from requirements analysis and implementation through testing and production delivery.
- Worked with Product, UI/UX, and QA teams to deliver features aligned with business objectives.
- Troubleshot application defects, performed root-cause analysis, and implemented solutions to improve reliability.
- Participated in code reviews, Agile ceremonies, and collaborative engineering practices to maintain code quality and readability.

PROJECTS

TravelDesk - Multi-Tenant Travel Management & Email Automation

www.traveldeskcrm.com

- **Tech Stack:** Node.js, NestJS, TypeScript, MongoDB, PostgreSQL, RabbitMQ, AWS SQS, SES, SNS, S3, Lambda, Docker
- Built backend workflows for a multi-tenant travel CRM supporting email ticketing, customer queries, agent workflows, bookings, proforma invoices, and itineraries.
- Designed asynchronous email-processing workflows using AWS SQS and RabbitMQ to separate message ingestion, processing, and downstream event handling.
- Integrated AWS SES, S3, Lambda, and SNS to support inbound emails, outbound campaigns, and email lifecycle events.
- Implemented delivery, bounce, and complaint event processing to maintain email delivery status and campaign statistics.
- Developed ticket and agent activity tracking to maintain a history of customer interactions, ticket updates, and email events.
- Implemented topic-based email subscriptions and unsubscribe workflows to respect customer communication preferences.

BotSphere - Multi-Tenant Chatbot & Live Chat Platform

campaign.kgs.live

- **Tech Stack:** Node.js, NestJS, TypeScript, React.js, MongoDB, RabbitMQ, Redis, BullMQ, WebSockets, SSE
- Developed backend services for a configurable chatbot platform with conditional conversation flows and embeddable website widgets.
- Implemented automated query handling that resolved approximately 35% of common inquiries without human intervention.
- Built agent assignment and conversation-routing logic based on workload and inactivity.
- Implemented real-time chat, escalation workflows, and activity tracking using WebSockets, SSE, RabbitMQ, Redis, and BullMQ.
- Integrated WhatsApp APIs and webhook-based template approval and status handling, supporting campaigns to 1,000+ users.

KGS Store - E-commerce & Order Management Platform

store.khanglobalstudies.com

- **Tech Stack:** Node.js, NestJS, TypeScript, React.js, MongoDB, Redis, REST APIs
- Developed backend order-management APIs for an e-commerce platform handling 1,000+ orders per day.
- Integrated multiple shipping providers for shipment creation, tracking, and automated order-status updates.
- Reduced manual order-processing effort by approximately 20 hours per week through shipping and order workflow automation.
- Improved application performance through API optimization, database query improvements, and Redis caching.

EDUCATION

Master of Computer Applications (Computer Science) — 2020 - 2022

Jamia Millia Islamia, New Delhi | CGPA: 9.6/10

Bachelor of Science (Mathematics) — 2017 - 2020

Chhatrapati Shahu Ji Maharaj University, Kanpur
